SUMMARY

Founder-engineer and Georgia Tech CS student (graduating December 2026) shipping AI/ML-powered products end-to-end in startup environments. Co-founder of Update Analytics (CREATE-X), founding frontend developer at Qard, and former AI Engineer Intern at RMAICT. Range covers full-stack product engineering, CV/ML pipelines on messy real-world data, and GPU/HPC infrastructure.

EDUCATION

Georgia Institute of Technology — B.S. Computer Science

Expected December 2026 · Atlanta, GA

- **Threads:** Intelligence + Modeling & Simulation
- **GPA:** 3.37
- **Relevant coursework:** Computer Organization & Programming (C, memory management), Systems & Networks (concurrency, OS), Software Engineering & API Design (REST APIs), Statistics (regression, ANOVA, hypothesis testing), self-directed work in AI, machine learning, computer vision, and distributed compute.

EXPERIENCE

Update Analytics (updt.pro) — Co-founder & Primary Technical Engineer

2025 – Present · Atlanta, GA (CREATE-X, Georgia Tech)

- Co-founded AI-powered soccer analytics platform alongside a UEFA B-licensed analyst; own end-to-end CV/ML pipeline architecture, infrastructure, and product direction while the analyst co-founder leads tactical and domain workflows.
- Custom-trained YOLOv8 player and ball detection on a hand-labeled dataset of 100+ soccer clips, tuning confidence thresholds to handle motion blur, white-line ball confusion, and inconsistent broadcast footage.
- Built pitch keypoint detection + homography estimation to translate broadcast footage into normalized tactical coordinates, handling camera pans, zooms, and incomplete field visibility.
- Designed analyst-in-the-loop verification workflow to make outputs reliable on low-quality footage where standard CV systems fail.
- Provisioned ML experimentation infrastructure on Georgia Tech's PACE ICE HPC cluster (H100 GPUs, Slurm, CUDA) and deployment stack on FastAPI + Supabase/PostgreSQL + Cloudflare R2.
- Earlier scouting workflow supported real-world player evaluation processes, including analysis related to Miguel Berry during Charlotte Battery scouting.

Qard — Founding Frontend Developer

Jun 2025 – Aug 2025 · Atlanta, GA

- Led frontend engineering and interactive web experience for fintech startup, building responsive animated 3D interfaces in Next.js, Three.js, and Framer Motion.
- Improved page performance via dynamic imports, lazy loading, and render optimization, cutting page load time by 35% and increasing average session duration by 40%.
- Contributed to platform reaching 200+ users during early-stage launch (qard.dev).

RMAICT International — AI Engineer Intern

May 2024 – Aug 2024 · Kuala Lumpur, Malaysia

- Built document understanding pipeline using Hugging Face and the Donut model; trained on 1,000+ receipt images to convert raw images into structured JSON (item counts, prices, totals).
- Reduced manual data-entry workflows by multiple hours per day through automated document understanding.
- Prototyped transfer-learning workflows to extend receipt understanding into invoices and other financial documents.

PROJECTS

Embedding-Based Quote Retrieval System

- Built semantic search over 490k+ quotes using FAISS and Gemma-3 embeddings.
- Parallelized embedding generation on Georgia Tech's PACE H100 cluster using Slurm and GPU scheduling.
- *Stack:* Python, FAISS, Gemma-3, Slurm, CUDA.

Pong Baseball Automation App — *live on Apple App Store*

- Designed, built, and shipped solo end-to-end — frontend, backend, authentication, database, deployment, and App Store submission — replacing paper-based stat tracking with real-time digital tracking and cloud sync for 70+ live users.
- Eliminated 2+ hours of post-game manual data entry per game; navigated full Apple App Store review and public release.
- *Stack:* React Native, Expo, Supabase (auth + Postgres + storage).

xGENIUS — Soccer Analytics Pipeline

- Built sports analytics pipeline computing Off-Ball Run Impact Score (ORIS) on U.S. Soccer Federation movement datasets; produced tactical heatmaps and visualizations.
- *Stack:* Python, pandas, matplotlib.

SKILLS

Languages: Python, JavaScript/TypeScript, SQL, HTML/CSS, C, C++, Java **Frameworks:** React Native, Expo, Next.js, FastAPI, Django, Node.js/Express, Three.js, Framer Motion, Tailwind CSS **ML / Data:** YOLOv8, Hugging Face, FAISS, embeddings (Gemma-3), pandas, matplotlib, OpenAI/GPT-4 APIs **Infrastructure:** Supabase, PostgreSQL, Firebase/Firestore, Cloudflare R2, Docker, GitHub Actions, Git, Linux **HPC / GPU:** PACE ICE, H100, Slurm, CUDA **Practices:** REST APIs, Agile, CI/CD, requirements engineering
